

## What am I?

- Cut up the clues and give one clue at a time to small groups of children.
- Keep rotating the clues so that all the children have seen each one.
- When all the children have seen all the clues ask them what animal or insect they think the clues are about.

If our back wings are damaged we can still fly.	We have hooks on our feet for holding on to things.	We can camouflage ourselves very well on trees and leaves.	Our wings are covered with coloured shiny scales. If you touch them the scales will rub off.
We need to be warm for our bodies to work properly.	We drink nectar through a long tube called a proboscis,	Some of my friends can even taste with their feet.	Often our wings are one colour on the outside and a different colour on the inside.
